

Give the Duck a Qwacker

Wireframe

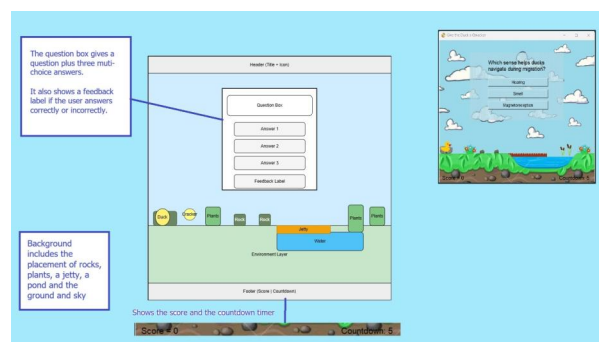

Designs

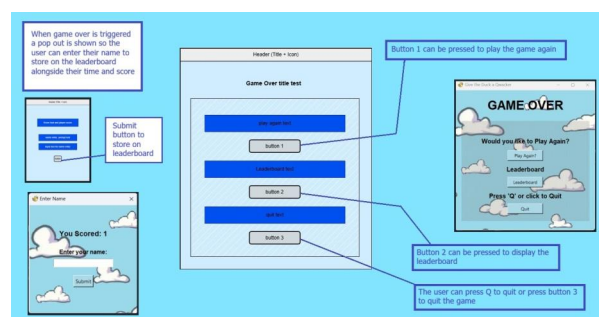

Give the duck a qwacker is a quiz game based on a platform format. The cutesy design and graphics are designed to endear to all age groups. The bright colours keep the player enticed and entertained. Each screen shares images that carry across from just the sky to the full game screen with the duck and the cracker characters. It is designed to quiz on general knowledge about ducks.

The start screen is designed to include pop outs for the user to view the instructions for the game and also provides the option to view the leaderboard (this can also be viewed from the game over screen). It has four buttons so the user can choose to start the game or quit the game.

The game screen is designed to give the game a platform like environment. With the aim of the game to get the duck home to his pond by answering the questions correctly, the duck moves by a certain distance to eat a cracker that displays upon a correct answer. If you answer the ten questions correctly, the duck lands home in his pond.

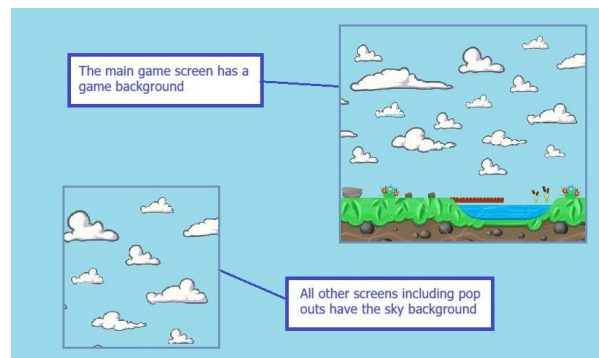

When the countdown triggers game over by reaching zero, a pop out automatically displays for the user to enter their name to be saved to the leaderboard alongside the time and score. The name can be their real name, nickname or if blank upon submit it enters a

name of player automatically. The game over screen is also designed to give the user the option of playing again, viewing the leaderboard or to quit the game.

The leaderboard is designed to be accessed from both the start screen and the game over screen. It shows the top ten fastest times with user names, times, scores listed from fastest to slowest.

Two background styles were chosen to keep continuity. The game screen has all the design features in the background whereas the other screens including the pop outs share the sky design from the game screen. It creates a seamless continuous theme throughout.

Overall the design is simple, easy to use and is accessible with contrasting colours and readable print. It is designed for ease of navigation and gives the user options on every screen.
